Summary

The study was conducted to determine the practices, benefits, effects, and the problems encountered by the people of the community in the implementation of solid waste management in Dumingag, Zamboanga del Sur. It involved 50 Local government officials and employees, 50 market vendors and 100 residents In the two selected barangays during the implementation of Solid Waste Management Ordinance in Dumingag, Calendar Year 2018-2019,

The study used the descriptive-comparative research design with the questionnaire-checklist as the main tool in gathering the needed data. Descriptive and inferential statistics were used to analyze and interpret the data.

The study revealed that Dumingagnons fully practiced the implementation of proper solid waste management and they benefited the said practiced. The proper waste disposal practices help the

people in promoting good health. Moreover, the participants considered lack of training on proper solid waste management as a serious problem in the implementation. And lastly, the three groups of participants have similar responses on the levels of implementation of proper solid waste management.

Finally, the study recommends that the JHCSC faculty may conduct training as an extension activity on the proper waste disposal; that the LGU shall conduct training to the people of the municipality in order that the implementation of solid waste management will be followed properly; that the residents maintain the orderly cleanliness of their surroundings, and help to the community service, also maintain the cleanliness of their stands and blocks, and then continue to follow the proper solid waste
