## **ABSTRACT**

Access to accurate information through technology is important. In J.H. Cerilles State College - Dumingag Campus, information disseminations, and answers to queries from concern individuals are sometimes not accurate, not updated and inconsistent.

The study designed and developed an Information Kiosk of JHCSC Dumingag Campus. The project was greatly of help to the college in terms of answering queries. This study was intended to the faculty and staff, students in all department, alumni and the visitors of the college through providing valuable information that they want to know or what they are trying to find. It was always available to them since it was automated. It also give an updated and correct information.

The system was developed with the use of PHP programming language and MySQLite for database. The methods used in this study was water fall model which include analysis, designing, coding, testing and maintenance.

It was recommended that the school of J.H.-Cerilles State College-Dumingag Campus implement the developed system to determine its functionality.

The results of the study revealed that the newly develop Information Kiosk helps clientele the campus regarding on their request and information craving.
