Zamboanga del Sur. **"BULLYING AMONG STUDENTS: IT'S CAUSES AND**
EFFECTS". An Unpublished Bachelor's Thesis.

Adviser: **MARK E. PATALINGHUG, Ph.D**

Summary

This study was conducted to determine the causes and effects in both elementary and secondary school in Dumingag, Zamboanga del Sur during the Schook Year 2019 2020.

The respondents of the study were the 100 Elementary pupils, 100 High school students and 100 Teachers in the selected schools of Dumingag Zamboanga del Sur.

The researcher utilized the questionnaire checklist in gathering the data and information necessary to accomplish the purpose of this investigation. Frequency counts, percentage, and WAM were the statistical tools used in this study.

Majority of the pupil/student-respondents were female, ages 21 years old and above, with religious affiliation of Roman Catholic and having an average income of 5,000 below. This means the participants of this study are matured enough with average income that can support family well being. Teachers, high school

students and elementary pupil's common forms of bullying observed in school towards Anti-bullying Act was high.

It is hereby recommended that the schools conduct anti bullying campaign; that the school create a school based anti-bullying program in order to address the needa of the school children and ensure positive outcomes; that administrators and teachers raise programs to sustain the acceptable behavior of the pupils/student; that the teachers continuously evaluate their classroom strategies to determine how this affect school climate in addressing changes in the community; and that a similar study be conducted in other schools to include more variables.
